

Panasonic Total Communication Solutions for law firms

Helping law firms stay connected

High-performance business telephones and voice mail systems. Leading-edge network cameras, video door intercom systems and conferencing products. Panasonic offers total communication solutions designed to meet the unique needs of today's law firms. Help maximize the growth potential of your firm today.

judgment

Panasonic ideas for life

The judgment is in. Panasonic telephone systems rule.

Panasonic telephone systems are advanced, yet simple-to-use, communication hubs that accept numerous peripherals to expand with your law firm. They help you manage your firm with less effort, improve client service, and foster seamless communication among your staff, customers, and business associates.

WIRELESS OFFICE MOBILITY

A valuable and efficient mobile communication tool. Don't be chained to your desk; go from office-to-office, to the library and more, and enjoy amazing clarity with our multi-cell cordless phone option.

Precise billing and phone accountability

Account coding helps give you a documented phone record of time spent on your clients, cases and projects. Panasonic phone systems are SMDR-ready. Simply enter the assigned code and, with an optional external PC, you can track, manage and tabulate phone time spent on specific cases.

No more fumbling for a tape recorder

Stop rushing to take notes. Every word counts, and with two-way record, all it takes is the push of a button to instantly record your conversations into your voice mailbox.¹

Do away with your address book

Connect your phone to your PC to use your personal contact list from Microsoft® Outlook² messaging software. Or use the system's built-in speed dialing feature keys to help program your entire client roster, business associates, investigators or most anybody else within your communication network. Store hundreds of numbers—even thousands, depending on your system—and conveniently scroll to the desired number.

¹Many states have imposed regulations on the manner in which 2-way telephone conversations may be recorded, so you should inform the other party that the conversation is being recorded. Consult your telephone service provider for further information.

Easy multi-party communications

Conduct telephone conference meetings with numerous relevant parties in multiple locations right from your office. Discuss legal strategies, save time and help eliminate costly miscommunications.

A handy attendant extension

Ideal for larger firms, the DSS console combines the old fashioned personal touch of a switchboard with today's leading-edge technology. Easily process incoming calls via the backlit LED readout and transfer calls with the push of a button.

Video door intercom

The ultimate in security and convenience. See, hear and talk to visitors at your firm's entrance with this invaluable option. View guests at your door via one or many monitoring stations strategically placed throughout your offices. There's even an electronic door opener on the monitor so you don't have to get up or leave your work. Screen visitors, buzz in important clients and help keep your assets protected.

²Microsoft® and Outlook® are registered trademarks of Microsoft Corporation.

law firms

Every chair is the best seat in the conference room

Lightweight. Ultra-sensitive. Fully-digital. The Panasonic KX-TS730 conference speakerphone transmits crisp, clear, echo-free audio when you're sitting as far as 10 feet away. Don't miss critical information being discussed—record up to 120 minutes of conversation without taking mountains of notes.¹ Ideal for divorce cases, real estate deals, will readings or meetings with multiple parties.

Separate lines for incoming calls

Have a private line routed directly to your office, another for paralegals and others dedicated just for clients for direct inbound calls to voice mail. It's ultra-flexible. With multiple outside CO (Central Office) lines, you can segregate phone lines to go where, and to whom, you want. Plus, the system can be programmed to handle calls based on time of day, such as business hours, lunch hours, and night hours.

Provide instant updates

A verdict is in. Evidence was found. There's a late-breaking announcement. Whatever the circumstance, when important information arrives, you want to hear it immediately. Off-hook Voice Announce is an amazing feature that allows you to break into a phone call and communicate a message, while putting the outside party on invisible hold. Instead of knocking on the recipient's door or having to wait for a phone call to conclude, the message can be communicated without interrupting the ongoing phone conversation.

Instant call screening

Screen calls efficiently without somebody having to do it for you. Caller ID² also collects and logs incoming numbers so you can record the caller's name to quickly call them back. Program specific incoming numbers to be automatically routed to different extensions or to the appropriate parties. Plus a convenient name announcement feature that can store up to 120 pre-recorded audio messages to match the Caller ID.

Add voice mail to manage incoming calls

Add a Panasonic voice processing system to smoothly service your clients and manage incoming calls—daytime, evening or night. Help reduce the cost of hiring additional employees to man the phones. Pre-recorded announcements can be made, and callers can be routed to a multitude of different employee mailboxes just as easily.

IP PHONES. JUST PUT ONE IN AND SAVE BIG!

If your law firm has small satellite offices or multiple locations, don't waste money installing a new communication system at each site. Just put in a Panasonic IP phone and go! With a TDA 100 or 200 system in the main location, this money-saving solution lets you utilize your existing infrastructure so that all locations can share voice mail and all other network system features. It's easy: just use Voice over Internet Protocol (VoIP) on your existing wide area network (WAN) or local area network (LAN).

NETWORK CAMERAS

your ideal monitoring solution

Designed to work in perfect synergy with the Panasonic phone system, Panasonic leading-edge network cameras help you to monitor the operation of your law firm seamlessly from nearly anywhere in the world—whether you're at home, in the office, on the road, or relaxing on vacation. When properly equipped, view and monitor your firm from your cell phone, PC, television set or from a variety of other handheld gadgets connected to the Internet.⁴

an eye for law firms

Panasonic network cameras offer endless advantages to law firms. Say you're out of the office; with a camera positioned outside the entrance you'll see who's at your firm's door, during business hours or after hours. Set the camera to take a picture and send it to your cell phone when a visitor rings the doorbell. With intercom, you can also communicate with the visitor.

peace of mind

Place cameras to view file rooms, offices, hallways and case-sensitive evidence. Plus, password protection helps prevent unwanted access to your system.

⁴ Connecting the camera to the Internet requires Internet access and may require that you obtain additional hardware such as a cable or DSL modem or a hub or router with a 10/100Base-T Ethernet connection. The camera will not be accessible from across the Internet unless the Internet connection is active. We cannot guarantee that your Internet connection will always be available. The frame rate of the motion image may be dependent upon the uplink speed of the Internet connection and other factors. Viewing may involve some time delay. Recommended minimum 100kbps upstream bandwidth for camera. View through Internet Explorer 6.0 or later. Compatible cell phones and PDAs must be able to display JPEG images and HTML or XHTML Web pages. Additional fee-based cellular services may be required. All pictures simulated.
